

Healthcare. Technology. Future.

The healthcare industry continues to experience rapid shifts in technology.

For Mazzetti and GBA to best serve the growing needs of our respective clients, Mazzetti needed to partner with the #1 Healthcare Technology/IT consulting firm in the country. And GBA needed to partner with an innovative healthcare engineering consulting firm. We found our companies to be ideal partners – to create the future for our clients and make it happen.

So, naturally, the marriage occurred. Mazzetti engineering consultants and GBA technology consultants have merged. And now 1 + 1 equals three.

Together, we will create better-informed designs.

Together, we will create better technology solutions for those designs.

Together, we will build the future of healthcare – integrated and optimized to heal.

Mazzetti's deepest experience is in healthcare – complex, critical systems – and we're also skilled in a wide range of other technically complex environments, from data centers to airports to clean rooms.

GBA's healthcare technology experience is unmatched – with more than 1,800 projects in our portfolio. Our work reflects the continuum of complex systems, encompassing medical equipment, IT, AV, security and low-voltage infrastructure.

We partner with you to create the environment you need to do your work more efficiently, more vibrantly, more sustainably. Using our *foursight* approach, we drive the future with you and create a better world, one healthcare delivery platform at a time.
